Can I add solar panels to my existing solar system?

It's relatively easy to add panels to an existing system; many of the more difficult steps, such as tying your system to the grid, will already be complete. You can explore several options for a system upgrade, depending on your available roof space and the specifications of your solar system.

How do I get more solar panels on my roof?

Working with your original solar installer is the best way to get more panels on your roof. Your initial installer will be comfortable with your system, know which permits you must apply for when adding panels, and what equipment will pair best with your existing system.

Can I add more solar panels if my roof is old?

Do not add more solar panels to your system if your roof is old, it is a leased system, or if you do not have enough roof space for extra panels. Contact your original solar installer to add more panels to your system.

Why add solar panels to an existing solar system?

How do I expand my solar PV system?

Just like solar installers size systems depending on household electricity consumption, the same is necessary for expanding an existing solar PV system. First, start by evaluating the energy bills for the house since the contractor installed the solar panel system. Next, determine if your clients have plans to increase their electricity usage.

Expanding your solar setup can meet increased energy demands, like charging an EV or switching to electric heating. Wondering how to add more solar panels to an existing RV system or ...

Adding more solar panels to an existing solar system can help when you need to charge a new EV or power up a solar battery.

Thinking about adding solar panels to an existing system? Learn what to consider, from costs to equipment, incentives & shading issues.

Maximize your solar power potential! Learn how to seamlessly expand your existing system with additional solar panels for increased energy generation.
