Safety requirements for batteries and battery rooms can be found within Article 320 of NFPA 70E

It is common knowledge that lead-acid batteries release hydrogen gas that can be potentially explosive. The battery rooms must be adequately ventilated to prohibit the build-up of hydrogen gas. During ...

OSHA's requirements for battery storage are not mere suggestions but vital protocols designed to safeguard workplaces from potential hazards. By embracing these guidelines, industries ...

In this article, we'll explore some of the most widely used regulations that control hydrogen gas levels in forklift battery charging areas.

Stop battery overheating. This checklist details essential venting clearance and code rules for safe, compliant battery cabinet installation.

Article 320 is the heart of NFPA's 70E for battery workers. This Article requires that a battery risk assessment must be performed prior to any work to identify the chemical, electrical shock, and arc flash hazards

When batteries are being charged, the vent caps shall be kept in place to avoid electrolyte spray. Vent caps shall be maintained in functioning condition.

Battery packs and other removable storage batteries shall not be stacked or charged in an enclosed cabinet unless the cabinet is a Battery Cabinet approved by the Fire Department.

The new 2014 code language is based on the understanding that not all batteries require ventilation or produce the same levels of gas. Now, the ventilation must be appropriate for the type of battery used ...

Firstly, cabinets must be constructed of non-conductive material, such as wood or plastic, to prevent electrical shocks. In addition, they must be corrosion-resistant to withstand the harsh conditions ...
