-----

Modern charging of lithium and nickel based batteries starts with a constant current, until a certain voltage and then a constant voltage until the current falls to some level that indicates end of ...

You would need to attach the magnets to the opposite side of the PCB from the looks of that connector, otherwise the pogo pins won't be able to reach. Does the circuit have polarity reversal ...

Deriving the formula from "scratch" for charging a capacitor Ask Question Asked 9 years, 4 months ago Modified 9 years, 2 months ago

How would I go about simulating a charging battery in LTSPICE? I've seen these two articles (A Tutorial on Battery Simulation - Matching Power Source to Electronic System and Accurate electrical battery ...

Cell phone battery charging is handled through a battery charging IC. Typically a switching regulator that varies voltage and current in order to charge the battery. It also measures ...

Is wireless charging indeed impossible for a device in a metal case like for example a mobile phone? Would it be possible to perhaps leave a small window permanently covered with ...

Can I use my 135 Ah deep cycle battery to power a 2000 W inverter and at the same time charge my battery with a 50 A, 7 stage battery charger? I don't expect to be drawing more than ...

Accordingly to what I've found in several sources (user's manual of electronic devices, various forums, e.t.c.) I shouldn't charge my Li-Ion batteries in cold temperatures because this would ...

It will just make much more sense to buy a Type-C PD charger if your devices support it, rather than still dealing with the problem of which USB adapters you can use to convert to Type-C ...

The charging cycle for lithium ion batteries can be quite complex, especially in the case of multiple cells in series, but typically involves 4 basic steps: Read voltage, if lower than a certain value ...
