So there is a lot of uncertainty in the Chinese solar industry, but there are also irrefutable facts: China needs to continue to expand domestic solar capacity to reach its climate target....

Critics of China's climate policy argue that China is not trying to replace fossil fuels with renewable sources of energy, but instead trying to increase the energy capacity of both forms of energy.

To address these constraints, China's National Development and Reform Commission and the National Energy Administration issued a policy document in October setting a clear timetable.

China power statistics - April 2025 In the first four months of the year, wind and solar power generation capacity accounted for 89% of new capacity (see Figure 1 below). Solar continued to show significant ...

China achieved a new milestone in its energy transition, with wind and solar power together generating a quarter (26%) of the country's electricity in April 2025, the highest monthly ...

In the 12 months to June 2025, wind and solar generated more electricity than hydro, nuclear, and bioenergy for the first time. Just four years earlier, they produced only half as much. This...

Delving into the relationship between winter conditions and solar panel efficiency, this article investigates whether winter adversely affects the power generated by solar panels.

The 277 GW of utility-scale solar capacity installed in China in 2024 alone is more than twice as much as the 121 GW of utility-scale solar capacity installed in the United States at the end of ...

Most of China's renewable potential lies in northwest China's "Shagehuang" areas, while major demand centres are along the eastern coast. This requires long-distance transmission and ...

China s solar energy can still generate electricity in winter

China's solar generating capacity is expected to surpass coal for the first time this year, according to the country's top electricity industry group, marking a milestone in the country's...
