Who is responsible for urban water supply in Windhoek?

Urban water supply is the responsibility of the local authority(City of Windhoek) which works with Ministry of Agriculture Water and Land Reform (MAWLR) and NamWater.

How has the drought index impacted Windhoek?

Drought index strategy encouraged water usage restrictions and water conservation. Artificial recharge from dams to aquifer ensured water safety against evaporation. Windhoek water demand is likely to surpass the potential value of 35 Mm³ per annum. The average total annual rainfall has slowly been fluctuating,with a net decrease.

What is managed aquifer recharge in Windhoek?

The Managed Aquifer Recharge (MAR) system in Windhoek has proven to be a cost-effective and dependable approach for augmenting water supply,meeting increasing demand,and mitigating the risks of water scarcity caused by droughts and climate change.

Does Windhoek have a water supply system?

Institutional arrangements exist between the City of Windhoek,which is responsible for its local water supply,and NamWater,a parastatal organisation responsible for national bulk water supply (Pietersen and Beekman,2016). NamWater works closely with MAWLR,which is mainly a strategic player in groundwater investigations and management.

With this objective in mind, this paper presents a perspective of the drought response strategies implemented by the City of Windhoek (CoW) and the engagement with domestic and ...

The City of Windhoek requires an estimated N\$7.8 billion to service land in response to rapid urban growth, Windhoek mayor Ndesihafela Larandja revealed yesterday.

Affirmative Repositioning Khomas regional chairperson Sem David has asked the City of Windhoek to respond within 48 hours to a letter seeking justification for the electricity tariff hike.

The City of Windhoek said it will revoke the 15% water savings demand target under Category D and return to "Normal Supply - Category A" status.

properly cited. Introduction This review paper focuses on how climate change affects water supplies and adaptation measures. Windhoek is a prime example of a semi-arid urban c.
