Can solar panels save you money?

Solar panels could help you save £100s a year on your electricity bills. Using the energy you generate can mean big savings for some households. You can get paid to export electricity you generate but don't use through the Smart Export Guarantee (SEG). Hefty upfront costs mean it could take 10 years to break even.

How much money can you save with solar?

The average U.S. homeowner saves about \$57,000 over 25 years by going solar. Why trust EnergySage? How much can you save on electric bills with solar by state? Are solar panels worth it? What if you could lock in your electricity costs today and never worry about rate hikes again? That's essentially what solar panels do.

Are solar panels a good investment?

Solar panels require an upfront investment but provide significant savings on energy bills over time. Depending on your area's electricity costs, you could save between \$37,000 and \$148,000 over 25 years with solar panels. The higher your local electricity prices, the greater your potential for solar savings.

How much will solar panels save you over 25 years?

The average U.S. homeowner will save around \$57,000 over 25 years after installing solar panels, but your savings will vary depending on where you live and the cost of electricity in your area. The table below shows our state-by-state solar savings estimates over 25 years.

Discover if solar panels save money, explore costs, benefits, and challenges, and learn how they can impact your finances and the environment.
