---

The Waratah Super Battery, one of the largest battery energy storage systems in Australia, has suffered a catastrophic transformer failure, delaying its full commissioning until 2026.

With transformer lead times of 24 to 36 months now common, this possibility is very real. This incident highlights a stark reality in the battery energy storage system (BESS) sector: physical ...

Australia, New South Wales, Munmorah: The Waratah Super Battery, Australia's most powerful battery storage facility, has suffered a major setback after one of its three transformers failed during final ...

This comes amid reports in various news outlets, such as the Australian Financial Times (AFR), regarding a "catastrophic failure" of transformer equipment at the site of the world's most powerful battery ...

More than a month after a major transformer failure at the Waratah Super Battery in New South Wales (NSW), one of the world's biggest batteries at 850 MW / 1,680 MWh when fully operational, few ...

One of the BESS plant's three high-voltage transformers has suffered a "catastrophic failure," just days from final testing, according to reporting from The Australian Financial Review, leading to significant ...

The world's most powerful battery storage project under construction north of Sydney has been hit by a major failure of one of three giant transformers, creating a significant headache for...

The Waratah Super Battery - the most powerful battery in Australia and quite likely the world - faces more delays following a catastrophic failure of one of the project's three transformers.

The world's most powerful battery storage project under construction north of Sydney has been hit by a major failure of one of three giant transformers, creating a significant headache for the BlackRock ...
