---

China's renewable electricity generation capacity is expected to continue growing in 2026, driven by strong solar power expansion, despite a slight decline in average wind power utilization ...

China's installed wind power generation capacity has consistently ranked first in the world for an impressive 15-year streak, according to the latest data released by the China Electricity ...

China's floating offshore wind prototypes The global deep-sea floating offshore wind is still in the pilot demonstration stage. By the end of Sept. 2024, 5 semi-submersible wind turbines have been ...

Under current policies, a total of 981 GW of new capacity is expected to be added by 2030. This translates to an average of 164 GW of new installations annually, with a projected compound annual ...

At 3:12 a.m. Friday, during a critical period for summer electricity demand, the first batch of units from the 800-megawatt offshore wind power project in Dafeng, east China's Jiangsu Province ...

China added 356 gigawatts (GW) of non-hydro renewable generation capacity in 2024. Of this, solar accounted for 277 GW, and wind accounted for 79 GW.<sup>5</sup> Electric vehicles (EVs) accounted for 48% ...

As of May 22, 2025, a significant report highlights that China's wind power generation capacity reached 1.482 billion kW this year, surpassing that of thermal power generation for the first ...

Guided by its goals of peaking carbon emissions before 2030 and achieving carbon neutrality by 2060, the country is rapidly reshaping its power system to accommodate a new ...

China's 1.4 TW operating solar and wind outstrips thermal power In Q1 2025, China's wind and solar capacity surpassed its thermal (coal and gas) capacity for the first time, supplying nearly 23% of the ...

# Expected wind power generation in East China

In recent years, China has made many new breakthroughs in the development of wind power technology in the fields of high-power wind turbines, wind turbines for ultra-low wind speed, ...
