-----

After several years of development, the solar collector Rawlemon begins his commercial career. Created by the German architect Andr  s Broessel, it is a transparent ball filled with water capable of converting ...

Look at the solar power generator in a form of sphere. Read the advantages of this model.

German-born, Barcelona-based architect Andr  s Broessel has developed a futuristic spherical glass solar energy generator that's both interesting and functional.

German Architect Andre Broessel believes he has a solution that can "squeeze more juice out of the sun", even during the night hours and in low-light regions. His company Rawlemon ...

Several projects are underway to boost the optimal efficiency of today's renewable technologies. However, Andr  s Broessel's spherical glass solar energy generator could be just what ...

the spherical glass solar energy generator uses the advantageous strategy of implementing a ball lens and specific geometrical structure to improve energy efficiency by 35%.

Created by Andre Broessel, a German architect inspired by his daughter's toy marbles, the Rawlemon design uses a spherical lens to concentrate sunlight on a small photovoltaic panel and combines...

A new spherical solar energy generating globe, "Betaray" has been developed by German architect Andre Broessel and solar energy architect colleagues at Rawlemon Studios in Barcelona, Spain. ...

A German Company Rawlemon has created a spherical sun power generator prototype called the beta.ray. This technology combines spherical geometry principles with a dual axis tracking ...

Shaped as a sphere that functions like a magnifying glass, this spherical solar collector concentrates the incoming diffuse sunlight on its surface through the spherical lens to a collector containing solar ...
