What does a solar technician actually do?

Solar technicians (also called PV installers or solar panel installers) are the skilled professionals who bring solar energy systems to life. They assemble, install, and maintain solar panel systems on rooftops, ground-mounted arrays, and other structures.

How can I become a solar energy technician?

To become a solar energy technician, you will first need a high school diploma or its equivalent. High school students aspiring to join the solar industry are advised to take courses in math, science, computer, and electronics.

How can I become a solar contractor?

To become a solar contractor, aspiring professionals should take high school courses in math, science, computer, and electronics. However, earning at least a bachelor's degree is also required.

Does HACC offer a solar panel installer training program?

HACC offers a solar panel installer training program combining online instruction with hands-on laboratory sessions. The 40-hour curriculum covers installation processes, panel placement optimization, and integration of inverters, charge controllers, and battery banks for both grid-tied and off-grid systems.

A Solar Technician specializes in the hands-on installation, inspection, troubleshooting, and maintenance of solar power systems. These professionals typically work on photovoltaic (PV) panels ...

New photovoltaic technicians learn the skills and techniques required for their job and employer during this time. The chart below shows how long it takes to gain competency as a ...
