What is the largest wind turbine in the world?

The MySE 16-260 earns its largest-ever tag thanks to its rotor diameter of 260 meters (853 feet) and its swept area of 53,902 square meters (580,196 square feet); it's also the most powerful wind turbine we've seen so far, offering 16 megawatts of power.

Is the world's largest wind turbine going green?

The MySE 16-260 in its turbine field. (China Three Gorges Corporation) News about switching to greener energy sources is always good news, and this certainly counts: The world's largest wind turbine constructed to date is now up and running and contributing to the power grid in China.

What is the world's most powerful offshore wind turbine?

These massive blades are destined for installation on what is expected to be the world's most powerful offshore wind turbine, a 26-megawatt (MW) unit being developed by Dongfang Electric Corporation. The shipment took place on August 1, with the blades now en route to an offshore testing base.

What is the largest offshore wind farm in the world?

Hornsea One is the largest offshore wind farm in the world. It lies off the Yorkshire coast in the North Sea. The project includes 174 turbines spread across more than 400 square kilometers of ocean. Each turbine stands over 100 meters tall and can deliver more than 7 megawatts of power. The total output reaches 1,218 megawatts.

In 2023, the average rotor diameter of newly-installed wind turbines was over 133.8 meters (~438 feet)--longer than a football field, or about as tall as the Great Pyramid of Giza. Larger ...

By their very nature, wind turbines can be astoundingly huge--but just how big and powerful can the most impressive turbines get? Today we'll be taking a look at 8 of the largest wind ...

News about switching to greener energy sources is always good news, and this certainly counts: The world's largest wind turbine constructed to date is now up and running and contributing ...

List of largest wind turbine models, based on rotor diameter and wind turbine sizes. Learn how different models of wind mills impact energy production.

# Large wind turbines

The company is pursuing large-scale, high-capacity wind turbines and openly sharing updates and testing progress with the public.

This list includes the most powerful wind turbines, including those with a power rating within 5 MW of the current most powerful wind turbine that has received customer orders.

The world's largest wind turbine--currently being tested off the coast of China--has blades that are more than twice as long as a Boeing 777's wingspan.

"From Asia's first 10 MW and 13 MW turbines to the world's largest 18 MW and now 26 MW turbines, Dongfang Electric has led China into the era of large-megawatt offshore wind power.

While some of the largest wind turbines have never been deployed, what's the biggest and most powerful that's managed to start generating electricity.

The wind farm includes 87 turbines from two manufacturers: Siemens and MHI Vestas. Each turbine stands on fixed-bottom foundations placed in deep waters with strong wind conditions.
