-----  
What is the difference between A Level 1 and Level 2 charger?

At a glance, both Level 1 and Level 2 chargers do the same job -- they feed electricity into your car's battery. But how they do it, and how long it takes, are two entirely different stories. The difference mainly boils down to voltage, power delivery, and convenience-- three factors that can quietly transform how you live with an EV day to day.

What is a Level 2 EV charger?

What are Level 2 EV Chargers? Level 2 EV chargers offer faster charging compared to Level 1 chargers. They require professional installation and a dedicated circuit. A Level 2 charger converts AC power to DC and provides a higher power output, typically in the range of 3.3 to 19.2 kilowatts.

What is Level 1 charging?

Level 1 charging operates on standard 120V household outlets with the following specifications: Level 1 charging provides approximately 3-5 miles of range per hour of charging. Here's what this means for popular EV models: Most EVs come with a Level 1 charging cable, also called:

What is the difference between Level 1 charging and EV charging?

The difference mainly boils down to voltage, power delivery, and convenience-- three factors that can quietly transform how you live with an EV day to day. Level 1 charging operates on a standard household outlet (120 volts in the U.S.), the same one you'd use for a lamp or a coffee maker.
