Why do we install solar panels at Balakong & Penang?

By installing solar panels across multiple production facilities and offices at Balakong as well as at Penang, we have lowered our carbon emissions and decreased dependence on non-renewable energy. Our solar panels across all facilities generate 6,500+GJ annually, directly powering production while cutting emissions.

What is a PV curtain wall?

The PV curtain wall is the most typical one in the integrated application of PV building. It combines PV power generation technology with curtain wall technology, which uses special resin materials to insert solar cells between glass materials and convert solar energy into electricity through the panels for use by enterprises.

Are PV curtain walls good for commercial buildings?

Compared with ordinary curtain walls, PV curtain walls can not only provide clean electricity, but also have the functions of flame retardant, heat insulation, noise reduction and light pollution reduction, making it the better wall material for glass commercial buildings. What are the key incentives for green construction in Malaysia?

Government support in Malaysia has increasingly prioritised green technology, clean energy, and sustainable buildings. Below is a mapped overview of key incentives relevant to green construction. New or existing companies in Malaysia, incurring qualifying capex in green building, renewable energy, and energy efficiency.

As the climate crisis intensifies, the construction sector is under increasing pressure to pivot from carbon-intensive practices to resilient, low-carbon solutions. For a construction company ...

These instruments encourage the use of high-performance glazing and facade solutions, including glass curtain walls with enhanced thermal insulation and solar control, to reduce operational energy use ...

Discover how solar photovoltaic curtain walls are transforming modern architecture by merging sustainable energy generation with sleek building design. This article explores their applications, ...

Low carbon solar curtain wall application in Penang Malaysia

The Malaysia Curtain Wall with Photovoltaic Glass Market market is comprehensively segmented by product type, application, end-use industry, and region, providing a detailed view of ...

The curtain wall method of glazing allows glass to be used in large uninterrupted areas creating consistent attractive facades. The flexibility in choice of NSG Group products allows the designer to ...

1. Overview of On-Grid PV Curtain Wall System The PV curtain wall is the most typical one in the integrated application of PV building. It combines PV power generation technology with ...

By installing solar panels across multiple production facilities and offices at Balakong as well as at Penang, we have lowered our carbon emissions and decreased dependence on non-renewable ...

The Malaysia PV Curtain Wall System Market is divided by product type, application area, end-use industry and region. The product Moderna range ranges from basic options to modern ...

Penang's tropical climate and rising energy costs make photovoltaic curtain walls an ideal solution for commercial building upgrades. This article explores how this technology merges solar energy ...

We specialize in providing high-quality aluminum curtain wall systems that enhance the beauty, efficiency, and durability of modern buildings. Designed as non-structural outer coverings, our curtain ...
