---

Optionally place any IC electrical item in the upper slot. The Wind Mill will charge it or output power at a rate of 0-11 EU/t depending on placement and weather conditions. Windmills below sea level (64) will ...

At high Y levels without many obstructions the Wind Mills can stop generating energy if there is raining or thundering, although this is an indication that there is a high probability of the Wind Mills to get ...

A rotor is required to run a Wind Turbine. Once a rotor is placed inside the GUI, the turbine is given sufficient space, and the wind level is strong enough for the rotor, the Wind Turbine ...

The Wind Mill is a machine added by IndustrialCraft 2. It produces Energy Units (EU) by interacting with wind. The EU output is variable depending on weather conditions and placement. It will output ...

IndustrialCraft 2 includes two main types of wind generators: the old Windmill, which predates the introduction of rotors, and the Kinetic Wind Generator, which incorporates the rotor ...

At the start of my new survival i tried out the new wind power mechanic using kinetic wind tirbines and a kinetic generator. I quickly crafted a carbon wind turbine and built myself a tall tower ...

GUI The Wind Mill is an Industrial Craft 2 generator. Wind Mills generate a variable amount of EU depending on their height and the weather patterns of the world. In optimal conditions, a Wind Mill ...

Basically there are 2 wind generators for IC2. The old windmill that was present before the introduction of rotors, and the kinetic wind generator (wind turbine) which takes a rotor that depletes over time to ...

Making giant rafts of cables and wind-gens blotting out the sky is beyond fugly. Instead of having one gen, each hooked to its own dedicated bat-box and a half dozen cables servicing it, you ...

# My World Industrial 2 Wind Power Generation

So, I set up my new server with the Anvil map format and IC2 1.95 (plus the full set of other mods). The new height limit is 256. Great, I thought. Double the power output!. So I built a tower to ...

The machine will generate the same power day and night, in sun or rain, but the turbine must have a clear view of the sky (over the rotor housing at the top of the tower).
