What is energy storage performance testing?

Performance testing is a critical component of safe and reliable deployment of energy storage systems on the electric power grid. Specific performance tests can be applied to individual battery cells or to integrated energy storage systems.

Where can I find performance and testing protocols for stationary energy storage systems?

The United States has several sources for performance and testing protocols on stationary energy storage systems. This research focuses on the protocols established by National Labs (Sandia National Laboratories and PNNL being two key labs in this area) and the Institute of Electrical and Electronics Engineers (IEEE).

Do energy storage test protocols work in different regions?

One of the Energy Storage Partnership partners in this working group, the National Renewable Energy Laboratory, has moved forward to collect and analyze information about the existing energy storage test protocols and their use in different regions around the world. This chapter summarizes that information for several key regions globally.

What are the standards for stationary energy storage systems in India?

The Bureau of Indian standards governs testing protocols for stationary energy storage systems for the country of India. As examples of standards, IS-1651 provides information on lead-acid cells and batteries using tubular positive plates and IS-1652 is for lead-acid cells and batteries with flat positive plates.
