-----

A tool for easy analysis, visualization and comparison of cell battery data across many institutions

BLAST-Pack simulates the electrical and thermal response of battery modules or packs to degradation effects throughout its lifetime, incorporating the impacts of module and pack architecture ...

This article provides the dataset of operating conditions of battery behavior. The constant current condition and the dynamic stress test (DST) condition were carried out to analyze the battery ...

This is an excel file with 1,628 battery packs listed and 42,402 data points. The file comes as a .xlsx file to allow you to easily download it and open in Microsoft Excel.

In this work, the datasets associated with lithium batteries in the public domain are summarised. We review the data by mode of experimental testing, giving particular attention to test ...

The dataset includes time series data on cell voltages, currents, surface temperatures, and pack-level resistance from up to 36 cells arranged in three parallel branches.

This dataset includes accelerated lifecycle data for Li-ion battery packs composed of two 18650 cells. It covers various loading conditions, including constant and random loading levels, as well as second ...

Whenever you look at a new design of battery pack it is important to do some benchmarking of that design in the context of other battery packs. Any new pack will be measured ...

These directories compile a variety of battery datasets. They serve as portals to extensive battery research data, facilitating advancements in energy storage technology.

We present an accelerated Li-ion battery life cycle dataset focused on a large range of load levels and the characterization of the life cycle of a battery pack composed of two 18650 battery cells.

## Pack battery data

This is an excel file with 1,628 battery packs listed and 42,402 data ...
