---

Spain has launched the world's first solar-powered superconducting maglev cargo network, slashing freight times between major ports from 1 hour to just 5...

A Florida-based startup is proposing a fully automated container transport system that would whisk containers via a tunnel across the Isthmus of Panama using Maglev technology.

The tunnels and bridges are 500 feet (152 meters) wide so they can handle trains going both directions at the same time. The locomotives are solar-powered and can generate 220,000 ...

The Puerto Internacional Las Americas (PILA) aims to be an alternative to the Panama Canal for shipping containers and it s planned to be an underground tunnel that uses Maglev ...

Puerto International Las Americas (PILA) is proposed to be an underground green tunnel that will function as an alternative to the Panama Canal.

Panama Canal connects the Pacific Ocean with Atlantic Ocean and work as a borderline between north and south America. This canal reduces the lead time significantly.

They are all due to travel through one of the world's most famous bottlenecks - a vital gateway for global shipping - the Panama Canal. A highly unusual drought, right in the middle of...

After a historic drought that paralyzed vessel transits through the Panama Canal, the Panama Canal Authority is moving ahead with major investments in new infrastructure to mitigate ...

The container is equipped with foldable high-efficiency solar panels, holding 168-336 panels that deliver 50-168 kWp of power. It is the perfect alternative to unstable grid power and diesel generators, ...

# Panama Tunnel Uses Solar-Powered Containers with Ultra-High Efficiency

In this study, we explore the implications of implementing speed reduction measures driven by increasing operational efficiency at chokepoints such as the Panama Canal.
