Overview National laws and policies Renewable electricity overview Sources Clean Development Mechanism projects in China Environmental protection and energy conservation Energy production and consumption Challenges Chinese policies explicitly promote the use of clean energy as well as increasing the use of domestically manufactured technology. In the clean energy sector, China is a leading source of technology transfer to other developing countries. Since 2010 it has often led the European Union and the United States in clean energy investments. As of at least 2024, it is the world's leading energy financier.

The planet's third biggest polluter is adding wind and solar and electrifying transport at a faster pace than China did at the same levels of development, new research finds. Its clean energy ...

Article 1 This Law is enacted for the purpose of promoting the development and utilization of renewable energy, increasing the supply of energy, improving the structure of energy, safeguarding the safety of ...

The country dominates the manufacturing of solar panels, wind turbines, and lithium-ion batteries, driving down global prices and making clean energy more accessible worldwide. It also ...

XINING, June 9 -- Amid China's green energy revolution, the world's largest solar photovoltaic power plant on the Qinghai-Xizang Plateau is forging a unique development path, ...

The Renewable Energy Law is a framework policy which lays out the general conditions for renewable energy to become a more important energy source in the Peoples Republic of China.

In 2015, China became the world's largest producer of photovoltaic power, with 43 GW of total installed capacity. [9][10] From 2005 to 2014, production of solar cells in China has expanded 100-fold. [7] The ...

China's 13th Five-Year Plan for Solar Energy Development contained specific goals for solar technology innovation, including commercialized monocrystalline silicon cells with an efficiency of at least 23% ...

China made impressive progress in developing renewable energy to provide access to clean energy and electricity to its predominantly rural population before the economic boom that followed the "open ...

China has achieved stunning growth in its installed renewable capacity over the last two decades, far outpacing the rest of the world. But to end its continued dependence on fossil fuels, it ...

Some of the largest projects under development are in the Inner Mongolia region in northern China. The Kubuqi Desert in Inner Mongolia is the planned site of the largest collection of ...
