Base Stations Enable Mobile Communications
Antennas Are Placed in Various Locations
More Mobile Devices Means More Base Stations
Base Station Output Power Is Low
Exposure Limits Are Set by Independent Organizations
Exposure Levels Are Much Lower Than The Limits
Public Access Is Restricted Where Needed
No Adverse Health Effects According to The Who
Mobile phones and other mobile devices require a network of base stations in order to function. The base station antennas transmit and receive RF (radio frequency) signals, or radio waves, to and from mobile phones near the base station. Without these radio waves, mobile communications would not be possible. Radio waves have been used for communication... See more on ericsson The World Countries
