The utility model discloses an intelligent constant temperature solar hot water system.

Solar Water Heating Systems (SWHS) are a clean and renewable source compared to any other source of water heating. However, affected by the weather, solar energy.

Here, we develop an intelligent auto-switched and zero-energy dual-mode thermal management device, which is able to spontaneously switch between heating and cooling modes by ...

A technology for solar hot water and automatic water replenishment, applied in the field of solar hot water systems, can solve problems such as incompatibility and low water temperature, and achieve ...

The utility model discloses an intelligent constant-temperature solar water heating system.

Parameters such as the amount of cooling medium (rainwater), its temperature, flow control, panel temperature, and the current prediction of local weather conditions based on the rapid ...

The SR501 Solar Controller intelligently manages un-pressurized solar water heaters. It monitors tank and collector temperatures, controls water loading, and operates the heating element to maintain a ...

The wireless receiver and the mobile terminal are matched and used to control an intelligent system of the whole civil house. The intelligent constant-temperature building solar civil house is reasonable in ...

It is developed using the latest NEC high-performance microcontroller to achieve intelligent control; All devices are industry standard and maintain good operation in cold, hot and humid environments. At ...
