Can you sell solar power to the grid?

Although many people with solar systems on their homes or businesses think that they can sell excess electricity to the power grid, the reality is that you can only sell power to the grid if you have an electricity generator's license and qualified power-generating assets.

Does solar energy technology end with electricity generation by PV or CSP?

Solar energy technology doesn't end with electricity generation by PV or CSP systems. These solar energy systems must be integrated into homes, businesses, and existing electrical grids with varying mixtures of traditional and other renewable energy sources.

Can I sell power to the grid without a generator?

As we stated previously, you cannot sell power to the grid without being a registered generator. You can, however, receive billing credits for excess power from a solar system or wind turbine. Read on to learn about the different ways to sell back power. This is the most common way consumers believe they can sell electricity to the grid.

How is solar energy generated?

Solar energy - Electricity Generation: Solar radiation may be converted directly into solar power (electricity) by solar cells, or photovoltaic cells. In such cells, a small electric voltage is generated when light strikes the junction between a metal and a semiconductor (such as silicon) or the junction between two different semiconductors.
