In our STEO forecast, utility-scale solar is the fastest-growing source of electricity generation in the United States, increasing from 290 BkWh in 2025 to 424 BkWh by 2027.

Find up-to-date statistics and facts on the solar photovoltaic industry in the United States.

The following table ranks the best and worst states for solar energy production (shown in thousand megawatt-hours) in October and November, number 1 represents the best state for solar ...

Twenty states generated more than 16% of their electricity from wind and utility-scale solar, while 26 states generated at least 10% from these clean power resources.

Find statistics on electric power plants, capacity, generation, fuel consumption, sales, prices and customers.

California Distributed Generation Statistics (DGStats) is the California Public Utilities Commission's official public reporting site of all distributed generation projects that are on a customer's site or ...

California leads as the top solar state. With over 54 GW of solar installed, enough energy to power over 15 million homes. Texas has the fastest growing solar economy with the largest utility-scale solar and ...

The Public Power Statistical Report is the central source for American Public Power Association members to find data that detail key aspects of public power and the electric utility industry overall - ...

List of electricity data aggregated by U.S. state. View number of power plants, total monthly generation, monthly generation by source, and monthly electricity sales revenue.

The roles of utility and distributed solar vary by state. Southern and Western states rely more on utility-scale solar, while northern states and Hawaii rely more on distributed solar.
