Renewable Energy Generation Renewables in The Electricity mix Hydropower Wind Energy Solar Energy Biofuels Geothermal How much of our electricity comes from renewables? In the sections above we looked at the role of renewables in the total energy mix. This includes not only electricity but also transport and heating. Electricity forms only one component of energy consumption. Since transport and heating tend to be harder to decarbonize - they are more reliant on oil and gas - r... See more on our world in data IRENA - International Renewable Energy Agency Renewable energy statistics 2025 - irena Data on renewable power capacity represents the maximum net generating capacity of power plants and other installations that use renewable energy ...

This interactive chart shows the amount of energy generated from solar power each year. Solar generation at scale - compared to hydropower, for example - is a relatively modern renewable ...

Data on renewable power capacity represents the maximum net generating capacity of power plants and other installations that use renewable energy sources to produce electricity.

Global solar generation grew by a record 31% in the first half of the year, while wind generation grew by 7.7%, according to the report by the energy think tank Ember, which was ...

The world's wind power sector recorded strong growth in the first half of 2025, with global installations rising by 64% compared to the same period of 2024. A total of 72,2 gigawatts ...

Renewables collectively accounted for one-third of electricity generation, led by hydropower (14% of total

The proportion of wind power and photovoltaic power generation in the first half of the year

electricity generation), wind (8%), solar PV (7%) and bioenergy and waste (3%).

This dataset contains yearly electricity generation, capacity, emissions, import and demand data for over 200 geographies. You can find more about Ember's methodology in this ...

The International Energy Agency projects significant growth for photovoltaics (PV) in 2024 over the record-breaking year in 2023. Over the next two years, virtually all new electric ...

Solar PV accounts for almost 80% of the global increase, followed by wind, hydropower, bioenergy and geothermal. In more than 80% of countries worldwide, renewable power capacity is set to grow faster ...

The curtailment rate for solar power rose to 6.6% in the first half of 2025 from 3.9% in the same period a year earlier while the rate for wind rose to 5.7% from 3%, according to the...
