In this study, we developed a multi-objective optimization approach for wind turbine blade design that quantitatively addresses power, load, and stall characteristics.

Mechanical Design Brake Blade Position (Figure 2) Parameter 7. Conclusions For reasons of efficiency, control, noise and aesthetics the modern wind turbine market is dominated by the horizontally mounted three blade design, with the use of yaw and pitch, for its ability to survive and operate under varying wind conditions. An international supply chain has evolved around this design, which is now the industry leader and w... See more on pdfs.semanticscholar
