What are the benefits of solar panels?

The productivity of your solar panels: If you live in a sunny area and your solar panels are very efficient, your system will generate more electricity and have a shorter EPBT. The solar panel manufacturing process: Some solar panels require more energy for production than others.

Why is solar energy important?

Solar energy creates free, renewable power from the sun. It's abundant and produces no carbon emissions or local air pollution. Still, about 60% of the electricity that power plants generate in the U.S. comes from fossil fuels like coal and natural gas, which we know contribute to issues related to global warming and climate change.

Why do we need solar panels?

It cuts carbon emissions, cools the world by fighting climate change, and has clean air and water. Solar panels on homes, businesses, and institutions lower the use of fossil fuels, the main source of global warming. By becoming solar, we are saving our world for generations to come.
