DURABILITY Our engineers designed the turbine to start spinning at very low speeds but endure very high speeds, tested running at 120 miles per hour with no problems.

How Many Turbines Will Power A House? *Courtesy of Climate Central.

At a 6-foot (2 meter) blade height, the medium turbine has demonstrated its durability in truck testing, enduring steady winds gusting up to 72.5 miles per hour.

Our vertical axis wind turbines are the perfect solution to your energy needs. Combining beauty with function, our sustainable energy solutions deliver whisper-quiet power without sacrificing aesthetics ...

Unlike conventional wind turbines that require at least 3 m/s wind speed to start spinning, the tulip shaped wind turbine begins rotating at just 1 m/s. As a result, it can generate clean energy ...

An American firm with a European division, Flower Turbines, is making strides in changing the way we harness wind energy through its tulip-shaped, small wind turbines. These ...

*Compact and Efficient: Unlike traditional turbines, Tulip wind turbines are compact and have petals that open and close based on wind conditions. This feature not only protects the turbine ...

In this study, a vertical axis wind turbine with a shape resembling an innovative rose flower-like is developed, additively manufactured, and numerically evaluated and compared with the ...

The tulip wind turbine has extremely low noise during operation, minimizing the impact on the surrounding environment. Its zero emission and pollution-free characteristics make it an ideal choice ...

The Large Tulip Wind Turbine is our biggest tulip turbine to date. With a 5-meter blade height, the Large Turbine can provide power from large commercial properties to data centers.
