Find the most up-to-date statistics about solar photovoltaic energy in the United Kingdom (UK)

In the last year, we have seen accelerating growth in uptake of storage and of small solar photovoltaics. Growth in EV usage, heat pump installations and smart meter adoption continued, but these all ...

The energy ratio is calculated by dividing temperature corrected primary energy consumption by GDP at constant prices, with the carbon ratio similarly calculated by dividing carbon dioxide...

The report analyses the key growth drivers, opportunities, and challenges influencing the United Kingdom distributed solar power generation market.

Battery storage continues to play an important role as fast acting flexibility providing a range of grid services. Despite the staggering growth, the business case for projects is becoming ...

The study examines the drivers, restraints, and trends influencing the United Kingdom (UK) Distributed Energy Storage Systems Market demand and growth.

We estimate that the UK now has about 20GW of solar capacity. Battery storage has also grown in capacity at the utility scale and in the residential market. The industry target is to treble solar to ...

A selection of large energy-consuming customers connected to NGED's network were contacted to seek views around their plans regarding future electricity demand, onsite generation and storage, and ...

In conclusion, the UK's solar and energy storage sector finds itself at an inflection point - bolstered by supportive policy, buoyant investment, and rapid tech improvements, yet challenged by ...

This series brings together all documents relating to the Digest of United Kingdom Energy Statistics (DUKES).
