Due almost entirely to the efforts of Palmer Cosslett Putnam--by 1941--America burst onto the wind power scene with a wind turbine that was bigger and bolder than anything that had ever come before.

The number of wind pumps and wind turbines declined as rural electrification programs in the 1930s extended power lines to most farms and ranches across the country.

Developed by two brothers from the plains of Montana in the 1930s and 1940s, Jacobs Wind Electric grew with the boom in remote power systems that was the bringing the wonders of electricity to ...

Following experience with reconditioned 1930s wind turbines, a new generation of American manufacturers started building and selling small wind turbines not only for battery-charging but also ...

1931: A vertical-axis wind turbine design called the Darrieus wind turbine is patented by Georges Jean Marie Darrieus, a French aeronautical engineer. This type of wind turbine is still used today, but for ...

Read on to discover many of the remarkable advances that wind power has made over this period of time. Daniel Halladay and John Burnham start the U.S. Wind Engine Company and build the ...

We review the development of wind turbines for generating electricity from the late 19th century to the present, summarizing some key characteristics. We trace the move from two to four ...

There were few areas of the country in the 1930s and 1940s that had more use for, or numbers of, these marvels of "modern" technology. For many years they gave isolated farmers and ranchers a source ...

In the U.S.A, by the 1930's wind turbines were common on farms. In this time period high-tensile steel was cheap and the generators were placed on steel lattice structures. The blades were often ...

My guest, Brandon Owens--author of *The Wind Power Story* --explores how wind power brought electricity

Wind turbines in the 1930s

to rural America long before the grid. We dive into the story of the Jacobs Wind Electricity ...
