Buy a second panel and cover it partly under the first panel. Here 60% of the area will not get any sun energy (bypass diodes activated) and the remaining will have a certain voltage e.g. 15V.

Solar panels are made of many PV cells wired together. Each cell produces about 0.5-0.6 volts. A 36-cell panel = around 18-22V (used in 12V ...

To be more accurate, a typical open circuit voltage of a solar cell is 0.58 volts (at 77°F or 25°C). All the PV cells in all solar panels have the same 0.58V voltage. ...

It represents the total voltage output of a series-connected array of solar panels. This voltage is important because it influences both the efficiency of energy ...
